Profile

My primary loves are technology, software development, and UI/UX design. There's nothing I love more than experimenting, discovering new ideas and new ways of doing things, and fully immersing myself in projects. More than anything else, I love being able to work and collaborate with other developers that share that same feeling of passion.

Experience

Senior Full Stack Software Engineer, Right Angle Engineering – June 2021 - October 2025
Was on a small team of 3 devs; initially hired to be a full-stack software engineer but over the course of four years, the role was expanded to include being the company's sole UI/UX Designer, IT/Network Admin, and co-head of SEO and Marketing. Was a mentor to multiple junior devs, and helped them grow into full-stack engineers. Designed the entire frontend of the website and was the UI/UX authority on how new features were implemented for clients. Also managed the company's AWS servers and performed other DevOps-related tasks.

Full Stack Software Engineer, Ambi – July 2019 - June 2021

Full stack developer who was in charge of developing and publishing Ambi's mobile app, allowing student, teacher, and administrator access to Ambi, from their iOS or Android devices, via a React Native app that aims to provide a seamless experience integrating with Ambi's web platform. The mobile app accounts for over 75% of Ambi's real- world daily active users.

Software Engineer, Notebowl – September 2017 - October 2019

Worked as the primary dev on a native iOS app to let students and teachers have full access to their courses, assignments, and more. Also contributed to the API and frontend repositories in order to resolve issues and enhance features.

Vice President and Co-Founder, Breakpoint LLC – June 2015 - September 2016

Coded websites and mobile apps from scratch in order to create the unique looks that clients wanted.

Front End Development Intern, meltmedia – May 2016 - August 2016

In charge of multiple project upgrades, developed automated scripts, and assisted with internal projects and client work. Worked on a team of 3 to 5 developers.

Computer Support Specialist, Arizona State University – November 2014 - March 2015

Wrote custom scripts to automate processes across multiple servers, imaged and repaired computers, assisted students and professors with lab support, and ran the help desk.

Quality Assurance, Arizona State University – August 2013 - November 2013

Tested software and websites for issues and bugs using a combination of Selenium, JMeter, and Maven before deploying them to ASU students.

Skills

Languages

- JavaScript/TypeScript
- Python
- Go
- Java/Kotlin
- Swift
- Objective-C
- C#/C++/C
- HTML/CSS
- Assembly

Tools

- Visual Studio
- Android Studio
- Xcode
- MySQL/Postgres
- CI (Github Actions/Jenkins/Bitrise)
- SSH/SFTP/FTP
